Alec McDivitt

PRINCIPAL SOFTWARE ENGINEER

ajmcdivi@gmail.com | 919-455-6400

> Principal Software Engineer with 9+ years in Healthcare IT. Orchestrated Enterprise-scale Azure migrations serving thousands of EHR Systems. Co-designed the FHIR-first interoperability platform replacing decades of legacy software. Track record of standing up IaC-driven cloud environments, production observability, CI/CD automation, and building engineering teams from zero.

// Experience

Altera Digital Health (formerly Allscripts)

Dec 2024 – Present

Principal Software Engineer

Enterprise Azure · Thousands of EHR systems · 70+ TouchWorks clients · FHIR platform architecture

`Veradigm cutover` — Executed Big-Bang DNS cutover redirecting traffic from thousands of Veradigm EHR systems across on-prem and cloud environments.

`TouchWorks cutover` — Stood up a parallel Altera platform serving TouchWorks EHR exclusively, orchestrating client-site configuration changes across 70+ clients to repoint to the new system.

`Unified interoperability` — Co-led Veradigm and Altera engineers through Azure migration of the Data Exchange Core service, connecting all EHR product lines.

`FHIR-first architecture` — Designed next-generation healthcare platform with Solution Architects for TouchWorks EHR, replacing legacy stack and clinical data warehouse.

`Clinical tooling R&D` — Built Node.js synthetic FHIR generator and prototyped a CQL authoring / Clinical Quality Measure evaluation tool (React, fqm-execution, Medplum) targeting a decades-old legacy software replacement.

`Lumina CDIS platform` — Architected metadata-driven Azure Data Factory extracting clinical data from on-prem TouchWorks EHR into a FHIR-compliant cloud data lake across multiple source systems and 35 clinical resource types.

`Performance + resilience` — Dynamic SQL template engine with sp_executesql eliminated ~2,600 plan-cache compilations per Historical cycle; added adaptive chunking, checkpoint-resume, and per-resource circuit breakers across 35 FHIR schedules.

`Secure multi-env IaC` — Terraform-provisioned poc/dev/uat/prd with per-customer SHIR, private endpoints, managed identity, and Key Vault; CI/CD via GitHub Actions with OIDC auth, DACPAC deployments, ADF validation, and Gitleaks scanning.

`CDS client acquisition` — Captured new Sunrise EHR clients by delivering Point of Care Insights custom authoring that filled the gap left by Elsevier ExitCare's market exit.

`Technical hiring` — Interviewed candidates and sourced engineering talent for Altera's Common Components Business Unit.

Azure | FHIR R4 | Service Bus | Durable Functions | Azure Data Factory | Terraform | GitHub Actions | SQL Server | Node.js | React | Medplum

Veradigm (formerly Allscripts)

Nov 2021 – Dec 2024

Senior Software Engineer

CDS Tech Lead · Azure IaC · Platform security · Production observability

`Load-test validation` — Designed Azure App Service load-testing solution validating CDS Real-Time Recommendations performance across all EHR consumers pre-migration.

`100% IaC coverage` — Provisioned all CDS cloud infrastructure with Terraform and GitHub Actions — environment parity, end-to-end CI/CD.

`Production observability` — Built Grafana monitoring dashboards with threshold-based Slack and PagerDuty alerting for stage and production.

`0 critical vulns` — Remediated all Dependabot and CodeQL critical vulnerabilities. Engineered mTLS for EHR-to-CDS service communication.

`Tech Lead` — Onboarded engineers and established development workflows for seamless CDS feature delivery.

`Terraform` `GitHub Actions` `Grafana` `PagerDuty` `Azure App Service` `mTLS` `.NET`

Allscripts

Apr 2019 – Nov 2021

Software Engineer

Full-stack development · Cloud migrations · Federal compliance

`Full-stack solution` — Built Patient List management application (Angular, .NET Web API) for CDS recommendation authoring and patient validation against the Allscripts Clinical Data Warehouse.

`CPM modernization` — Contributed to the Silverlight-to-Angular 13+ uplift of Clinical Performance Manager (CPM) — a no-code platform enabling providers to author and execute clinical quality measurements across their patient populations.

`Release ownership` — Oversaw all CDS deployments across client-facing environments, coordinating release cadence and rollouts.

`Cloud migration` — Led CDS platform migration from corporate data center to ATOS cloud provider across all client-facing environments.

`Federal deployment` — Deployed CDS stack into AWS for U.S. Department of State contract, meeting federal security and compliance requirements.

`Technical hiring` — Conducted Associate Software Engineer interviews, advancing recruitment efforts for the Allscripts AAP pipeline.

`Angular` `.NET` `AWS` `SQL Server` `WCF`

Allscripts

Feb 2017 – Apr 2019

Associate Software Engineer

CDS product development · CI/CD automation

`Core CDS modules` — Built Point of Care Insights (Angular 2+, .NET Web API) — a regulatory no-code platform for custom clinical content authoring, consumed by EHR systems enterprise-wide.

`CI/CD automation` — Configured Azure DevOps build and release definitions for CDS components across dev, QA, and performance environments; built UI test suite wired into the CDS build pipelines.

`AAP recognition` — Earned multiple nominations for Excellence in the Allscripts AAP Yearly Awards Program.

`Angular` `.NET` `Azure DevOps` `Selenium`

Allscripts

Aug 2016 – Dec 2016

Software Engineer Intern

`DXC eCoupon service` — Debugged and extended a WCF web service (DXC eCoupon Service) generating medication eCoupons consumed by EHR systems.

`Security tooling` — Built an Active Directory security audit tool for user tracking, claim validation, and role-based access configuration.

`WCF` `Active Directory` `C#`

// Education

North Carolina State University — Bachelor of Science in Computer Science
